Product Description

1.5-6m Parking Barrier Gate With 0.3-6s Operating Speed And 5 Million Operating Life

Product Description

Overview

The main benefit of our Automatic Boom Barriers is that vehicles need not wait for manual interaction with the manned station. Rather, the barrier will let the vehicle pass once the identification matches with the records from previously entered data while entering the premises. They are usually installed at parking facilities, drawbridges, level crossings, and entrances to restricted facilities. The gate used for entering and exiting the premise is being regulated using barriers that operate in resonance with the parking management system.
